

VACUUM PACKING MACHINE

Vacuum packaging is a technique of removing air from a pack prior to sealing as a means of food preservation. Its primary purpose is to remove air by compressing the packaging material into close contact with the product. Vacuum packing is able to protect products from any external elements from damaging the product.

Features

- › Hi-Speed with 2 chambers vacuum
- › Chamber size design for using 0.5 - 10 kg.
- › Automatic loading rice to chamber
- › Auto seal after vacuum done.

Specifications

Power	1.5kW, 3ph, 415VAC
Weighing Range	1 ~ 5 Kg.
Air Pressure	72 psi
Control Panel	Touch Screen (HMI)
Packing Speed	15/min
Function	Auto Adjustment Bag
